

# Research studies near you, **in plain language.**

Find clinical trials you may be a good fit  
for, safely and in your own language.

✓ **May be a good fit**

**Spanish-language digital CBT app  
for depression**

📍 1.3 miles 🏠 At home

🕒 **Possible fit**

**Add-on medicine for major  
depression**

⊖ **Probably not**

**Treatment for depression  
after childbirth**

## WHO IT'S FOR

# Meet Maria.

-  42, lives in Queens, New York City
-  Depression that hasn't improved on two medicines
-  Her doctor has never mentioned clinical trials
-  More comfortable reading and speaking Spanish

*Maria is a synthetic persona. All patient data in this project is invented.*

## THE PROBLEM

# Trials exist. Patients like Maria rarely hear about them, and the listings aren't written for them.

### 1 Hard to find

No one points her to studies. Searching registries means knowing the right medical terms first.

### 2 Written for researchers

Exclusion Criteria:

- \* Personal or close family history of schizophrenia or bipolar I disorder
- \* Inadequate response to  $\geq 2$  antidepressants at adequate dose and duration...

### 3 English only

Listings, summaries and next steps assume she reads medical English comfortably.

## HOW IT WORKS

# Four steps, from "I don't know where to start" to "someone will call me."

1

### Tell us

Condition, age, ZIP, how far you can travel, and your health in your own words.

> 2

### We search

Live ClinicalTrials.gov results: recruiting studies within your distance.

> 3

### We explain

Claude reads each study's criteria and writes a plain summary, why it may or may not fit, and questions to ask.

> 4

### You decide

Listen in 7 languages. Contact a study only if you choose, with consent.

**Before any of this:** a safety check reads what you wrote. If you might be in crisis, we stop and connect you to 988.

WHAT MARIA SEES

# Plain answers, with honest uncertainty.

**15 recruiting trials within 10 miles; 4 may be a good fit**

Near Queens (11368). Sorted by fit, then distance.

✓ **May be a good fit**

🏠 **Remote or at-home parts mentioned**

## Spanish-Language Digital CBT App for Depression

📍 1.3 miles away Elmhurst, Queens

This study tests a phone app that teaches coping skills in Spanish. You would use it at home for 8 weeks, with a short weekly call from a coach. You can get up to \$100 in gift cards for completing surveys.

🔊 **Listen**

➤ **Contact this study**

👁️ **Badges use an icon and text,**  
never color alone.

📄 **Written for a 6th-grade  
reading level:** what it tests,  
visits, length, payment.

❓ **"Why" shows reasons for,  
against, and unknowns,** plus  
3 questions to ask.

🔍 **Filter** by fit, distance, and  
remote-friendly.

Illustrative output on sample data.

# Hear it in your language, and read along.

## 🔊 Read along • Español

Este es un resumen automático hecho por un programa, no es un consejo médico. Una persona del equipo del estudio confirmará si este estudio es adecuado para usted.

### Right-to-left for Arabic

هذا ملخص آلي من برنامج، وليس نصيحة طبية.

**Every summary starts with a disclaimer.** Claude translates it into everyday words at a 12-year-old's reading level, keeping drug names, phone numbers and study IDs exactly as written. ElevenLabs reads it aloud.

English

**Español**

中文

Русский

한국어

العربية

हिन्दी

The language you pick is remembered for your whole visit.

# Built for someone who may be struggling.

**You don't have to go through this alone.**

Call or text 988 to reach the 988 Suicide & Crisis Lifeline, any time.

 **Call 988**

**If you are in immediate danger, call 911.**

## **Crisis check runs first**

If someone writes about ending their life, we show no trials, only support.

## **Never says "you're eligible"**

Only the study team decides. We never diagnose.

## **Never invents facts**

If the listing doesn't say it, it goes under "things the study team would check."

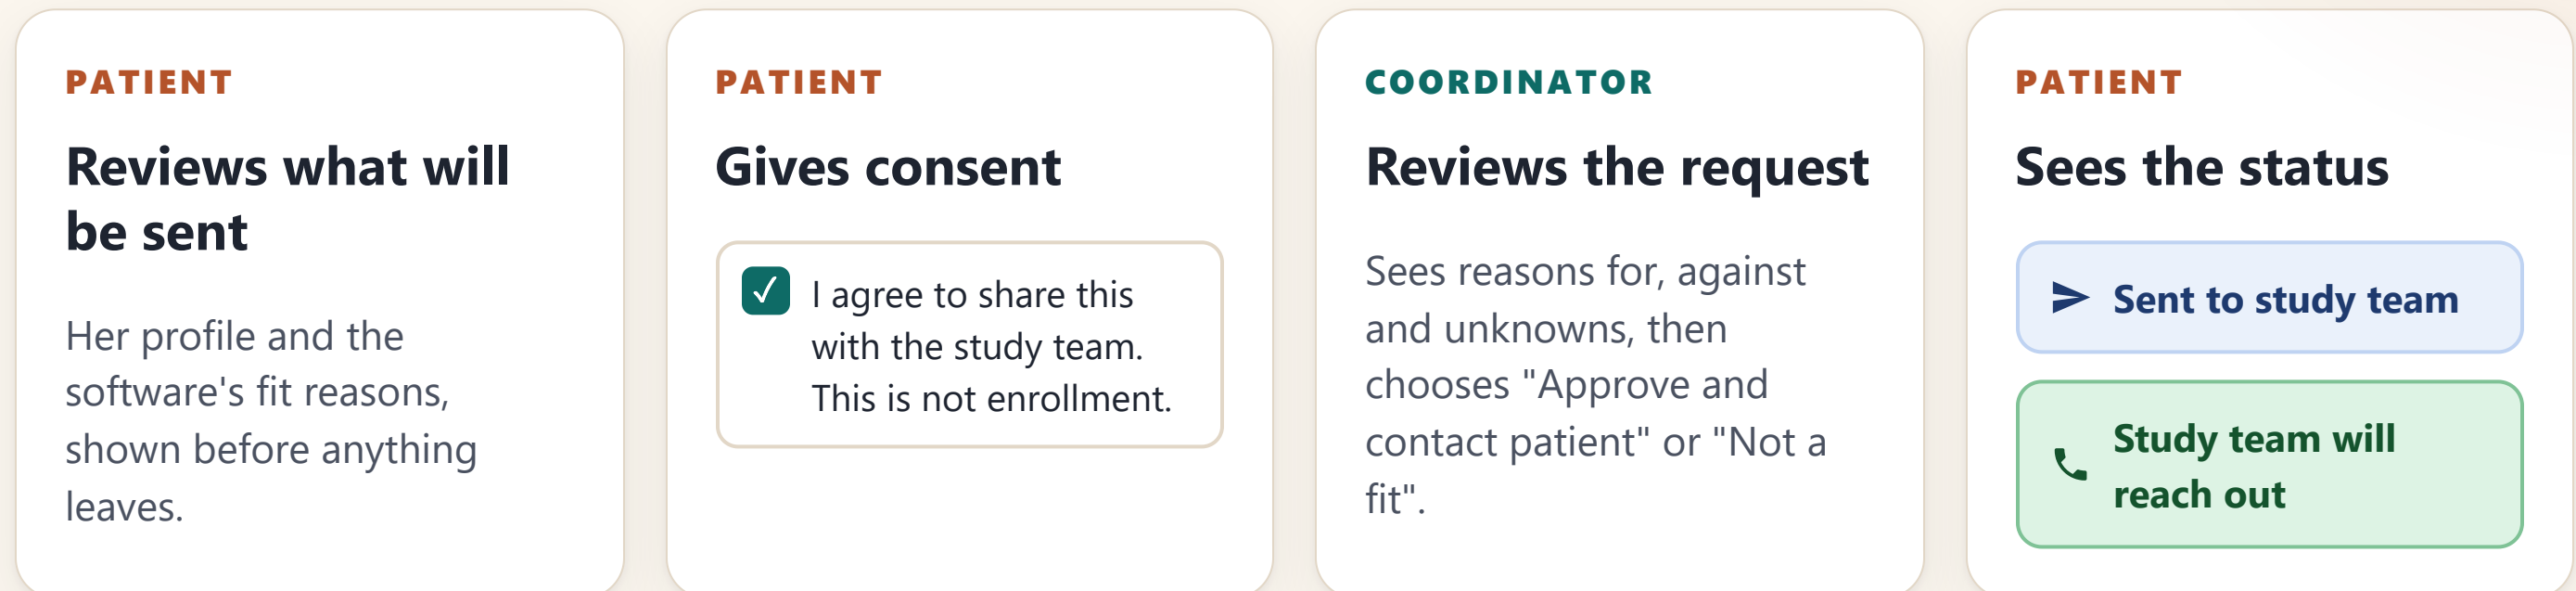

## **Always visible**

"TrialFinder is software, not a doctor" on every screen.

## HUMAN IN THE LOOP

# A person reviews every request. Nothing is sent without consent.

TrialFinder **never** presents anything as an enrollment decision.

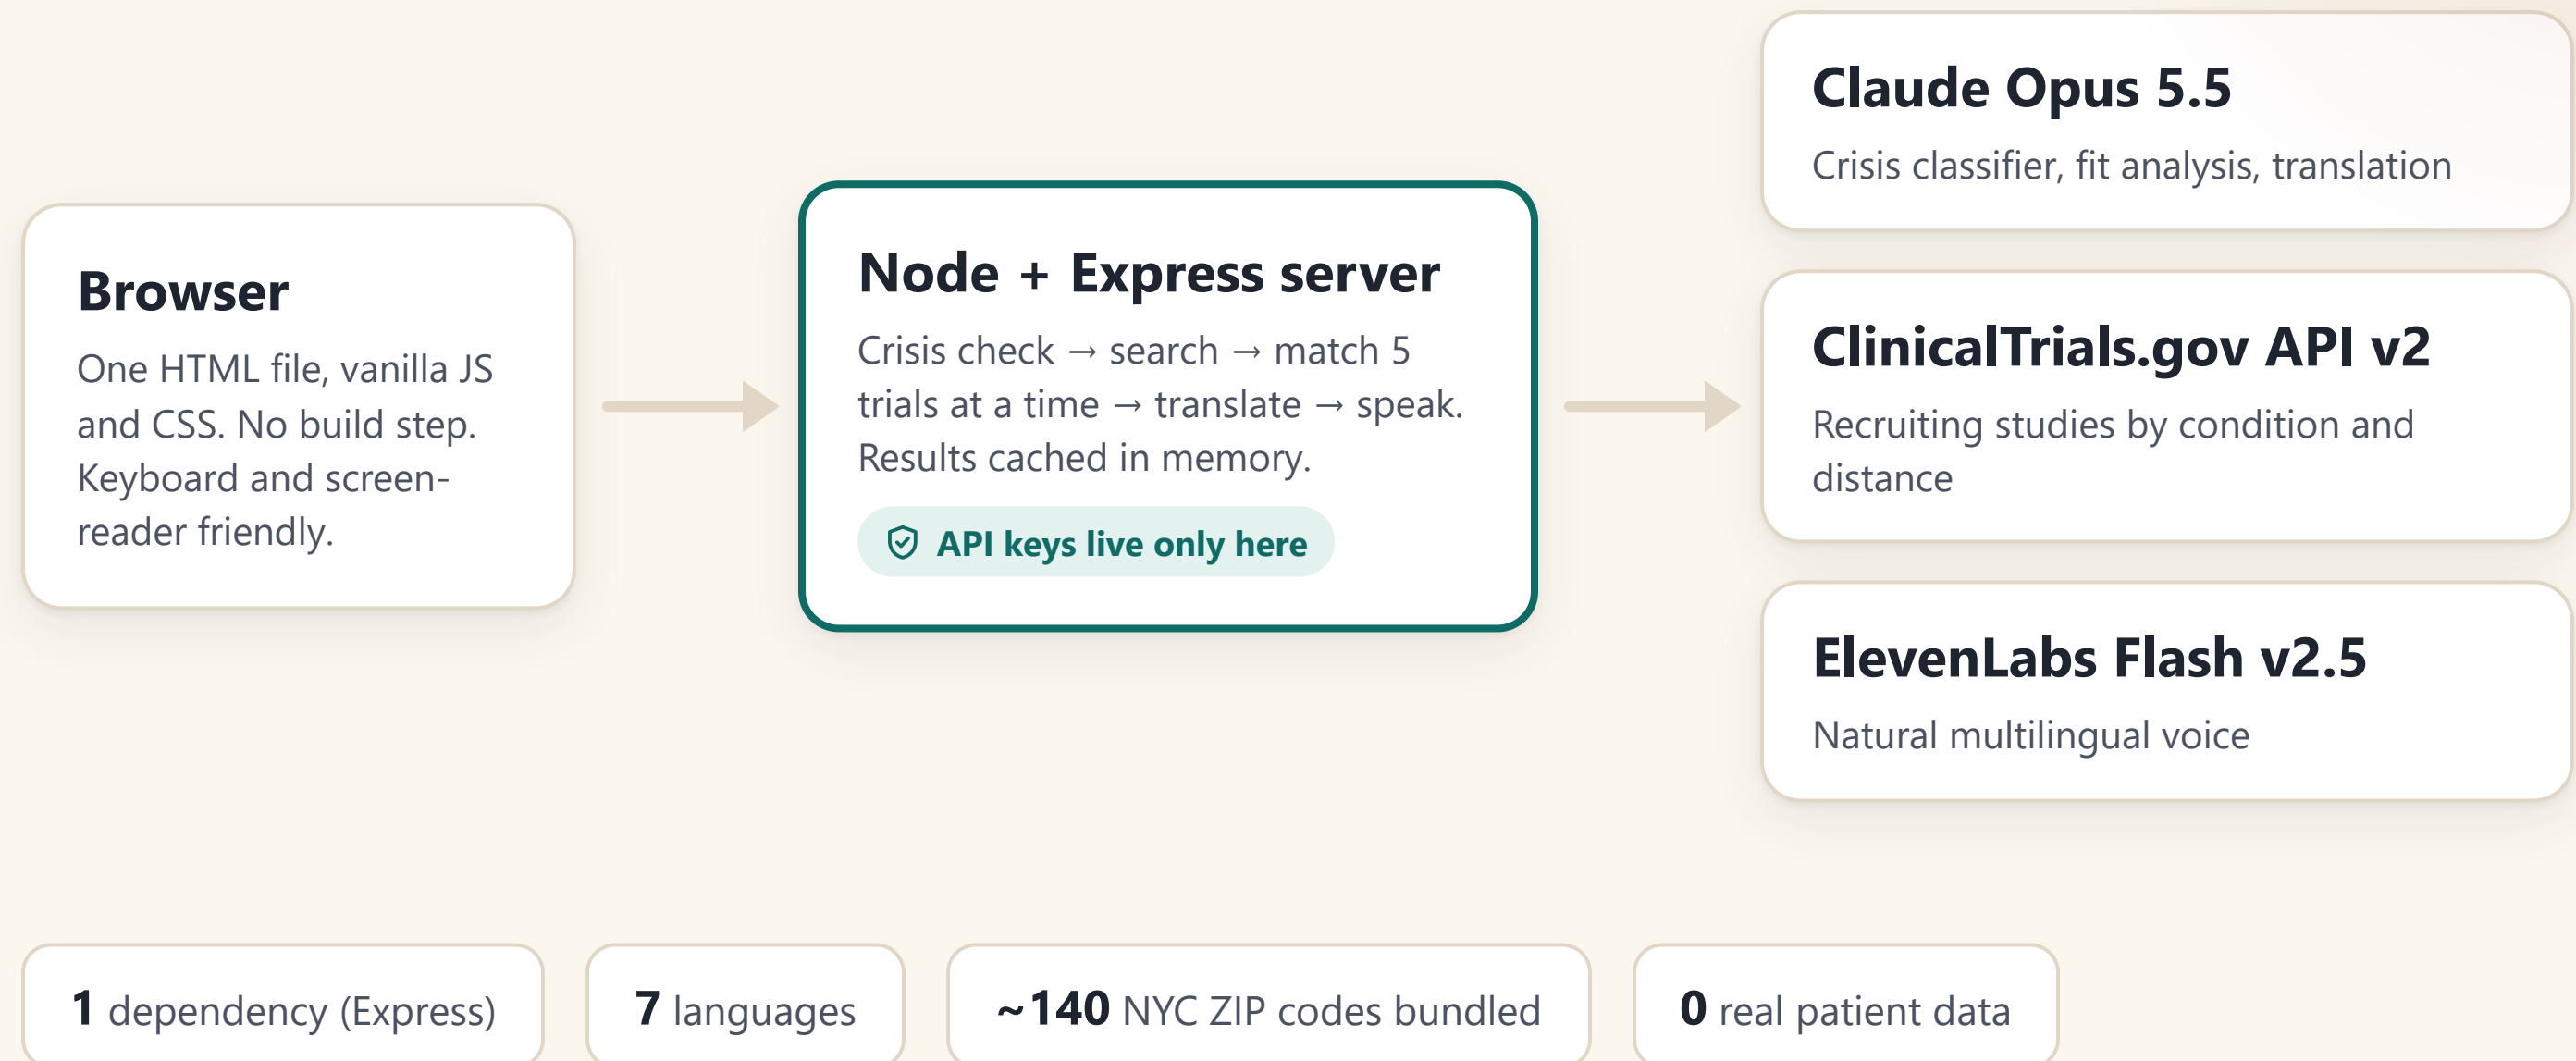

RELIABILITY

# Built so the experience never breaks.

| If this fails...                                  | ...TrialFinder does this                                                       |
|---------------------------------------------------|--------------------------------------------------------------------------------|
| <b>ClinicalTrials.gov is slow (8s+) or down</b>   | Loads 12 clearly labeled sample trials and shows a "Showing sample data" badge |
| <b>Claude is unavailable for the safety check</b> | Falls back to a keyword check. The safety check is never skipped.              |
| <b>Claude's answer can't be read</b>              | Marks the trial "Possible fit" with "Could not analyze automatically"          |
| <b>Voice service is unavailable</b>               | Uses the device's built-in voice and still shows the read-along text           |

## UNDER THE HOOD

# Simple stack. Keys stay on the server.

# Let's find Maria a study.

- 1 Load Maria and search
- 2 Read her results and the "why"
- 3 Listen to a summary in Spanish
- 4 Contact a study, then approve as the coordinator
- 5 See the crisis safety stop

Try it yourself

**localhost:3000**

Coordinator view: **/coordinator.html**

## WHAT'S NEXT

# What it takes to make this real.

### Real study teams

Route requests to actual site coordinators instead of a demo queue.

### Clinician review

Have clinicians and patients evaluate summaries and fit reasons for accuracy and tone.

### Privacy and compliance

Secure storage, accounts and HIPAA review before any real patient data.

### Beyond NYC

Real geocoding instead of a bundled ZIP table, and accurate site addresses.

### Test with real users

Usability sessions with screen-reader users and people with low health literacy.

### More languages

Translate the whole interface, not just the summaries, and add more languages.

# Thank you.
